

Transitional Care Reduces Hospital Readmissions

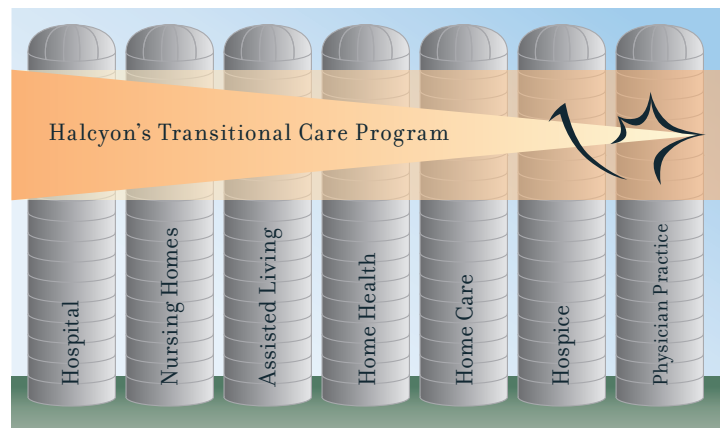

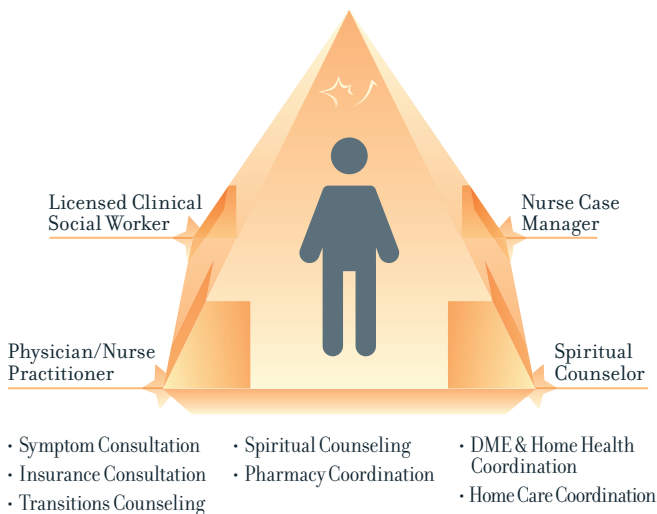

Halcyon offers a unique Hospital Readmission Reduction program that utilizes a comprehensive risk assessment tool to match specific interventions to specific risks. Halcyon's program utilizes a community based network of providers in conjunction with an experienced interdisciplinary team to help manage both symptoms and transitions.

Palliative Care is Transitional Care.

Halcyon's Palliative Care Program has a dual focus:

To anticipate, prevent and treat symptoms holistically, and,

To facilitate transitions across care settings, care providers and goals of care.

TRANSITIONAL CARE PROGRAM

Features

- A program not confined by pay source parameters
- An evidenced based intervention model for new and at risk patients
- A comprehensive interdisciplinary approach that includes spiritual counseling
- A data and outcome analysis approach that targets specific and measurable goals
- A patient centered approach that sustains a focus on choice and dignity

Call us to learn how our Transitional Care program can keep your patients living safely in the comfort of their own homes.

Benefits/Results

- Patients cared for in appropriate settings
- Prevention of breakthrough symptoms
- Dramatic reduction in unnecessary re-hospitalizations
